 Beef & Dairy Range Brand

Premium Hay & Pasture Mix

Mixes provide genetic diversity in a field, along with extending high-quality grazing or cutting periods and extending the productivity of the field for more months of the year. Genetic diversity often prevents a single disease or weather condition from adversely affecting the entire stand of forage. Additionally, in a mix, each species matures at different times, preventing the field from quickly over-maturing at the same time and rapidly losing forage quality. Legumes mixed into the stand increase the stand’s palatability, protein content and adds nitrogen to the soil. Beef & Dairy Range Brand is a high-performing mix of grass species and alsike clover for beef, dairy and hay producers that desire the addition of high quality clover in their forage but deal with low-lying fields or waterways that tend to stay wet for long periods of time (areas that can be too wet for red clover and alfalfa). Characteristics of Beef & Dairy Range Brand include:

- Improved varieties provide excellent yields, high forage quality, great cold and drought tolerance, and excellent disease resistance.
- Alsike clover that offers high quality nutrition and excellent persistence in wetter fields.
- Long seasonal production window, with the combination of numerous high-quality forage grasses.
- Wider grazing or harvesting window while stand has a high forage quality.

Mix Formulation:
- 34% Premium Endophyte-free Tall Fescue
- 25% Climax Timothy
- 15% Alsike Clover
- 12% Premium Medium-maturing Orchardgrass
- 9% Premium Tetraploid Perennial Ryegrass
- 5% Premium Forage Kentucky Bluegrass

Persistence
Good

Drought Tolerance
Good

Winter Hardiness
Good

Palatability
Excellent

Yield Potential
Excellent

Grazing Tolerance
Excellent

Planting Rate
New Pasture or Field: 25 lbs/acre
Overseeding: 15 lbs/acre

Suitable Soil Types
- Light
- Med
- Heavy

Planting Zones

Planting Times
Best in early spring or early fall when weather is cooler and moisture more reliable.
