Beef & Dairy WaterWay

Premium Hay & Pasture Mix

Mixes provide genetic diversity in a field, along with extending high-quality grazing or cutting periods and extending the productivity of the field for more months of the year. Genetic diversity often prevents a single disease or weather condition from adversely affecting the entire stand of forage. Additionally, in a mix, each species matures at different times, preventing the field from quickly over-maturing at the same time and rapidly losing forage quality. Beef & Dairy WaterWay is a high-performing mix of grass species for beef, dairy and hay producers that need to establish a high-quality stand in temporary drainage area (dips or low spots in fields). The three species of grasses in Beef & Dairy WaterWay are popular, proven species for the northern tier of the country. Characteristics of Beef & Dairy WaterWay include:

- High-quality mix, which includes 50% smooth brome, which is a sod-forming grass and helps hold soil in place.
- Improved varieties provide excellent yields, high forage quality, and excellent disease resistance.
- Wide grazing or harvesting window while stand has a high forage quality.

Mix Formulation:
- 50% Smooth Brome
- 35% Premium Endophyte-free Tall Fescue
- 15% Premium High-sugar, Tetraploid Perennial Ryegrass

Suitable Soil Types

Persistence: Excellent
Drought Tolerance: Good
Winter Hardiness: Excellent
Palatability: Excellent
Yield Potential: Good
Grazing Tolerance: Excellent

Planting Rate
New Pasture or Field: 25 lbs/acre
Overseeding: 15 lbs/acre

Planting Zones

Suitable Soil Types

Winter: Good
Spring: Excellent
Fall: Excellent
Summer: Good

Planting Times
Best in early spring or early fall when weather is cooler and moisture more reliable.
