Horse Range

Premium Hay & Pasture Mix

Mixes provide genetic diversity in a field, along with extending high-quality grazing or cutting periods and extending the productivity of the field for more months of the year. Genetic diversity often prevents a single disease or weather condition from adversely affecting the entire stand of forage. Additionally, in a mix, each species matures at different times, preventing the field from quickly over-maturing at the same time and rapidly losing forage quality. Horse Range is a high-performing mix of grass species for horses of all types, and the mix can used for hay or pasture. The four species of grasses in Horse Range are popular, proven species for the northern tier of the country. Characteristics of Horse Range include:

- High-quality mix of nutritious, preferred horse forages.
- Tolerates heavy grazing and traffic.
- Improved varieties provide excellent yields, high forage quality, and excellent disease resistance.
- Wide grazing or harvesting window while stand has a high forage quality.

Mix Formulation:
25% Premium Timothy
25% Kentucky Bluegrass
25% Premium Orchardgrass
25% Premium Perennial Ryegrass

Planting Rate
New Pasture or Field: 25 lbs/acre
Overseeding: 15 lbs/acre

Suitable Soil Types

Persistence
Good

Drought Tolerance
Poor

Winter Hardiness
Good

Palatability
Excellent

Yield Potential
Good

Grazing Tolerance
Excellent

Planting Zones

Planting Times
Best in early spring or early fall when weather is cooler and moisture more reliable.
