Beef & Dairy GrassKing

Premium Hay & Pasture Mix

Mixes provide genetic diversity in a field, along with extending high-quality grazing or cutting periods and extending the productivity of the field for more months of the year. Genetic diversity often prevents a single disease or weather condition from adversely affecting the entire stand of forage. Additionally, in a mix, each species matures at different times, preventing the field from quickly over-maturing at the same time and rapidly losing forage quality. Beef & Dairy GrassKing is a high-performing mix of grass species for beef, dairy and hay producers that only desire grass stands (no legumes). The four species of grasses in Beef & Dairy PureGrass are popular, proven species for the northern tier of the country.

Characteristics of Beef & Dairy GrassKing include:

- Improved varieties provide excellent yields, high forage quality, great cold and drought tolerance, and excellent disease resistance.
- Long seasonal production window.
- Wider grazing or harvesting window while stand has a high forage quality.

Mix Formulation:
35% Delay Orchardgrass (medium-late maturing orchardgrass product)
35% Premium Endophyte-free Tall Fescue
10% Premium Tetraploid Perennial Ryegrass
10% Premium Diploid Perennial Ryegrass
10% Spring Green Festulolium

Planting Rate
New Pasture or Field: 25-35 lbs/acre
Overseeding: 15-20 lbs/acre
