Beef & Dairy LeapStart

Premium Hay & Pasture Mix

Mixes provide genetic diversity in a field, along with extending high-quality grazing or cutting periods and extending the productivity of the field for more months of the year. Genetic diversity often prevents a single disease or weather condition from adversely affecting the entire stand of forage. Additionally, in a mix, each species matures at different times, preventing the field from quickly over-maturing at the same time and rapidly losing forage quality. Beef & Dairy LeapStart is a high-performing mix of grass species for beef, dairy and hay producers that only desire grass stands (no legumes) and need to quickly repair pasture. The three species of grasses in Beef & Dairy LeapStart are popular, proven species for the northern tier of the country. Characteristics of Beef & Dairy LeapStart include:

- Fast germination and growth for rapid establishment.
- Improved varieties provide excellent yields, high forage quality, and excellent disease resistance.
- Wide grazing or harvesting window while stand has a high forage quality.

Mix Formulation:
25% Amazon Tetraploid Perennial Ryegrass
25% Premium Diploid Perennial Ryegrass
20% Prana Tetraploid Perennial Ryegrass
20% Spring Green Festulolium
10% Premium Annual Ryegrass

Planting Rate
New Pasture or Field: 25-35 lbs/acre
Overseeding: 15-20 lbs/acre

Suitable Soil Types

Persistence
Poor

Drought Tolerance
Good

Winter Hardiness
Good

Palatability
Excellent

Yield Potential
Excellent

Grazing Tolerance
Excellent

Planting Zones

Planting Times
Best in early spring or early fall when weather is cooler and moisture more reliable.
